

Connect it

# Installation top tips

To ensure safe and easy installation of your new appliance, check out our top tips:

## 1 Water installation

- ✓ You will need a cold water feed and waste connection within 1.5m of your new dishwasher or laundry appliance
- ✓ All connections should be accessible and not behind a cupboard or out of reach

## 2 Hot zone

- ✓ Check you have the required clearance space in the hot zone directly above your hob: 650mm for electric, 750mm for gas
- ✓ Make sure there are no combustible materials, such as wallpaper, wood or electric sockets within the hot zone

## 3 Electrical installation

- ✓ There should be an existing electrical socket located within 1.5m of your new appliance
- ✓ Is your current appliance hardwired? Let us know if it is as we'll need to assign a qualified expert to complete the install
- ✓ Hardwired cookers need a red isolating switch within reach of the appliance

## 4 Cavity space

- ✓ Measure your cupboard cavity to ensure your new appliance fits the available space

## 5 Gas installation

- ✓ You will need a suitable gas connection within 1.5m of your new cooker site
- ✓ Our Gas Safe registered engineers will provide the necessary parts and equipment required to connect your cooker
