

Important Safety Information

Additional Information

LOGIK LVD7W15 & LVD7W18

We'd like to share with you guidance and additional information on the safe use of your tumble dryer.

We've found the top cover on some products can become deformed if subjected to significant weight (for example, it is sat on or heavy items are placed on top of it). If liquid is spilt on a deformed cover, the liquid could drip inside the appliance. We believe the likelihood of this scenario occurring is very low. If liquid does drip inside this may not be problematic but it could cause an electrical short circuit which may mean the machine stops working or, in an extreme case, a fire.

In addition to the information in your instruction book (a copy is available at www.teamknowhow.com/manual-gb), we would like to advise that you must not sit, stand or place heavy items on the top cover of your tumble dryer. Please also exercise caution when handling liquid near your tumble dryer.

If you have any concerns or you would like a stronger top cover fitted free of charge (if your product is affected), please contact us. We will need to know the serial number of your tumble dryer and your telephone number so we can contact you to arrange a visit.

If you are confident your top cover has not been subjected to significant weight or suffered spillage, you can continue to use your tumble dryer. If you believe your top cover has been subjected to significant weight or suffered spillage you should unplug your appliance as a precaution and contact us.

Register your Tumble Dryer

Can you please click below and register your tumble dryer and we'll then be able to contact you.

How to find your serial number

We will need you to tell us your products serial number. It should be on the inside of the door or if the label has been removed its also on the Rating Plate on the back.

Example of your Rating Label which is located on the back of your Tumble Dryer.
